

GK-M4-Lesson 17

There are 5 hexagons and 2 triangles. How many shapes are there?

I can add the hexagons
and the triangles.
The total number of
shapes is 7.

$$\boxed{7} = \boxed{5} + \boxed{2}$$
$$\boxed{5} + \boxed{2} = \boxed{7}$$

I can say this number
sentence two ways:
7 equals 5 plus 2.
7 is the same as 5 and 2.

I can say this number
sentence two ways:
5 plus 2 equals 7.
5 and 2 make 7.
