

GK-M4-Lesson 20

The squares below represent cube sticks. Match the cube stick to the number sentence.

Let's see. There are 5 squares in the whole stick.
 2 are crossed out, and 3 are left.
 I can tell about it like this:
 5 take away 2 is 3.
 Another way is like this:
 5 minus 2 equals 3.
 We just learned that "minus" is a math word for "take away."

$$5 - 3 = 2$$

$$5 - 1 = 4$$

$$5 - 2 = 3$$

5 tells about the whole cube stick.
 Minus 2 tells about the 2 that are crossed off.
 Equals 3 tells about the 3 that are left.
 It's a match!
