

GK-M5-Lesson 3

Circle 10 things. Tell how many there are in two parts, 10 ones and some more ones.

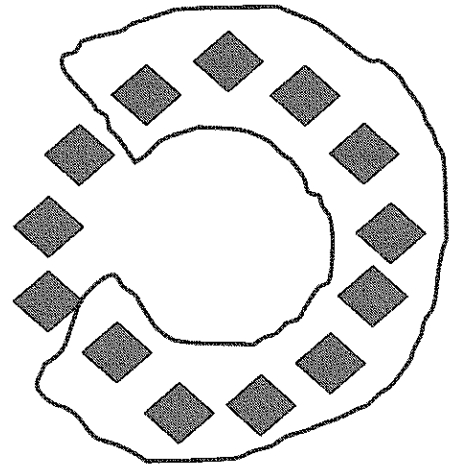

It's easy to find the 10 ones when they are in 5-groups.

I circle 10 ones and count the rest. Here are 4 more ones.

I have 10 ones and 4 ones.

It's a little tricky to find the 10 ones here. I make a line so that I remember where I start counting and then keep going around until I get to 10.

I have 10 ones and 3 ones.
