

GK-M6-Lesson 2

Trace the shapes. Then, use a ruler to draw similar shapes in the large rectangle.

It is easy to trace shapes!
I take my time and try to stay
on the dashed line!

Hexagons are tricky to draw because they
have 6 sides. The sides don't have to be
the same length. I know that as long as the shape
is closed and has 6 sides, it is a hexagon!
