

G1-M4-Lesson 29

Solve using quick tens and ones, number bonds, or the arrow way.

$$1. \quad 24 + 16 = \underline{40}$$

$$24 \xrightarrow{+10} 34 \xrightarrow{+6} 40$$

I solved using the arrow way because I know 16 is 10 and 6. I can add the 10 to 24 first to get 34. I know that 34 and 6 is 40.

$$2. \quad 17 + 12 = \underline{29}$$

$$\begin{array}{c} \diagup \quad \diagdown \\ 10 \quad 2 \end{array}$$

I solved using a number bond. I added 17 and 10 and got 27. Then I added 27 and 2 to get my answer of 29. I didn't need to write the number sentences because I can do the math in my head.

I didn't solve any using drawings this time. Using the arrow way and number bonds is more efficient for me now. If I get stuck I can always use a quick ten drawing.
