

G1-M1-Lesson 28

Read the story. Make a math drawing to solve.

Bob buys 9 new toy cars. He takes 2 out of the bag. How many cars are still in the bag?

$$\underline{9} - \underline{2} = \underline{7}$$

7 cars are still in the bag.

I can draw 9 circles for the 9 toy cars. Then I can cross off 2 because Bob took 2 out of his bag. There are 7 circles left. Those are the 7 cars that are still in the bag.

In the number bond, I can show 9 is the total number of cars. The part that was taken out is 2. The part that is still left is 7.

$$9 - 2 = 7.$$
