

G1-M2-Lesson 22

Read the problem. Draw and label. Write a number sentence and a statement that matches the story. Remember to draw a box around your solution in the number sentence.

Lee has 16 pencils. 7 of the pencils are red, and the rest are green. How many green pencils does Lee have?

I can draw 16 circles in 5-group rows for the 16 pencils. I can circle 7 circles and label this part r because there are 7 red pencils. I can circle the part that is left and label this g because the rest of the pencils are green. I can quickly see the part labeled g is 9. There are 9 green pencils.

I can subtract 7 from 16 to get the answer. My number sentence is $16 - 7 = 9$. I put a box around 9 because that was the number I did not know in the story.

I also could write $7 + 9 = 16$. That's another way to solve the problem. I would put a box around 9 since that's the unknown number in the story.

$$16 - 7 = \boxed{9}$$

9 of the pencils are green.

My statement to answer the question is "9 of the pencils are green."
