

G2-M4-Lesson 28

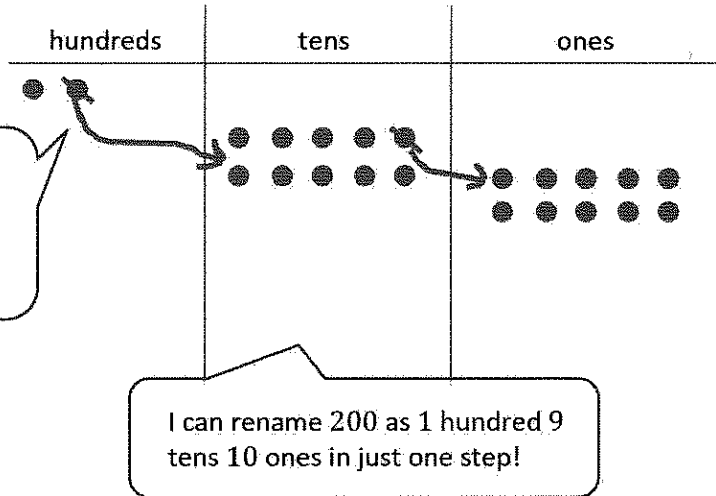

1. Solve vertically. Draw chips on the place value chart. Unbundle when needed.

$$200 - 108 = \underline{92}$$

$$\begin{array}{r} 1 \ 9 \ 10 \\ 2 \ 0 \ 0 \\ - 1 \ 0 \ 8 \\ \hline \end{array}$$

When I'm subtracting, I only draw the whole, 200, with chips.

Whatever I do with my chips, I record the change in the written subtraction. I am ready to subtract!

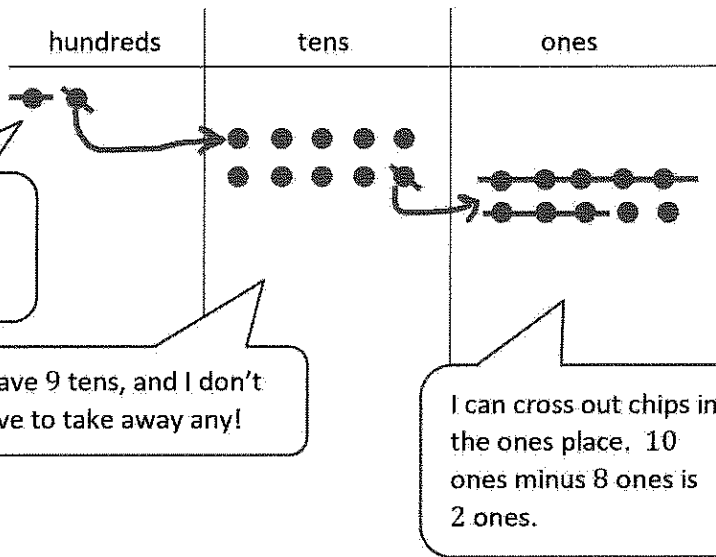

$$\begin{array}{r} 1 \ 9 \ 10 \\ 2 \ 0 \ 0 \\ - 1 \ 0 \ 8 \\ \hline 9 \ 2 \end{array}$$

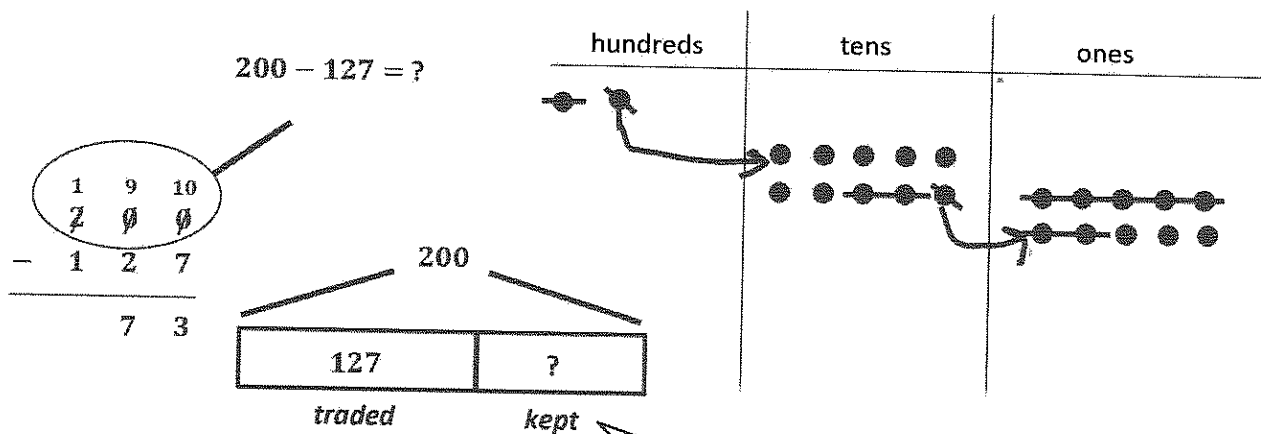

I have to take away 1 hundred, so there are 0 hundreds left.

I have 9 tens, and I don't have to take away any!

I can cross out chips in the ones place. 10 ones minus 8 ones is 2 ones.

2. Harry collected 200 baseball cards. He traded 127 of them and kept the rest. How many baseball cards did he keep?

Harry kept 73 baseball cards.

When I know the whole and one part, I can subtract to find the answer.

My tape diagram shows the part, 127, and the whole, 200. I don't know how many baseball cards Harry kept, so I put a question mark there; it's my unknown.
